Corrections or comments made relative to submittals during this review do not relieve the contractor from compliance with the requirements of the drawings and specifications. This check is only for review of general conformance with the design concept of the project and general compliance with the information given in the contract documents. The contractor is responsible for confirming and correlating all quantities and dimensions selecting fabrication processes and techniques of construction, coordinating his work with that of other trades, and performing his work in a safe and satisfactory manner.

1.0 SCOPE

1.1 Introduction to Manual

This QUALITY MANUAL describes the Quality Management System employed by the Company. Its contents have been reviewed and indicate compliance of this system with the requirements of International Quality Assurance System. It is supported by Manuals and Operating procedures which define in detail how each element of the Quality Assurance System is applied.

1.2 Manual Administration

There are two forms of this manual: Controlled and Uncontrolled Controlled copies are numbered and issued in accordance with Quality Manual Distribution List. Changes to the Quality Manual are made by the Quality Engineer.

The Controlled Manual is maintained at the latest issue level by the Quality Engineer. Obsolete copies are promptly removed from the signatories of the Distribution List.

Uncontrolled copies are up to date at the time of issue and not updated thereafter. They are issued under the authorization of the signatories of the Distribution List of the Controlled Copies. No record eed to be maintained f their issue and / or distribution.

2.0 Authorization

The management of Egysmart Electromechanical Engineering hereby authorizes the use of Quality Assurance System as detailed. His authorization in line with the Quality Management Policy and Objectives of Egysmart Electromechanical Engineering.

3.0 Quality System Requirement

EGYSMART
FOR MODERN ENGINEERING
ايجي سمارت للهندسة الحديثة

3.1 MANAGEMENT RESPONSIBILITY

3.1.1 Quality Policy

We, at Egysmart Electromechanical Engineering shall aim to achieve and sustain excellence in all our activities and are committed to Total Client Satisfaction by providing Services which meet or exceed the Client expectations.

تم المسح الضوئي بـ CamScanner

Scanned with CamScanner

- To satisfy the requirements of Quality Assurance System, reference manuals, operating procedures and work instructions shall define in details the application of each element of the Quality Assurance System.

With a view to ensure that the service is of desired quality we shall

1. Inculcate quality assurance at all stages form procurement of materials to final installation and testing.
2. Ensure compliance with the applicable standards/ codes and regulatory requirements.
3. Attend and resolve complaints from Clients with agreed tile schedules.

- The Quality Policy shall be understood, implemented and maintained by all personnel in the Company.

3.1.2 Organization

- Responsibility and Authority

The following is a summary of the responsibilities and authorities of the personnel

- Project Manager

Responsible to the Managing Director for:

1. Execution of projects.
2. Manpower and site facilities administration and coordination.
3. Administration of Egysmart Electromechanical Engineering plants, tools, calculation and test equipment.
4. Internal training including safety at work and quality assurance.
5. Control and monitoring of material usage and scrap.

EGYSMART
FOR MODERN ENGINEERING
ايجي سمارت للهندسة الحديثة

تم المسح الضوئي بـ CamScanner

Scanned with CamScanner

- **Company QA/QC Engineer**

Responsible indirect to the Managing Director and direct t DMJV QA/QC manager for:

1. Administration of the Quality Assurance program and of maintenance of Quality system documentation.
2. Ensuring that Quality Policy is understood by all personnel.
3. Identification of quality related problems and initiation of corrective actions.
4. Liaison with institutions in connection with quality related matters.
5. Implementation and execution of Internal Quality Audits.
6. Maintaining list of approved suppliers and relevant records.
7. Undertaking periodic vendor evaluation to ensure all supplies are to approved quality standards.
8. Implementing the QA/QC documents such QCP, ITP, MS, tech. checklist, QA /QC Log sheets, etc.
9. Preparation of Quality system documentation and regular updates.

- **Site Engineer**

Responsible for the Project Manager for:

1. Execution of the defined task.
2. Monitoring execution of the project and reporting on any malfunctioning.
3. Implementation of quality related measures and steps.
4. Technical guidance to Engineers and Foremen.
5. Authorizing use of material & equipment from stores.
6. Maintaining inspection and other relevant record.

تم المسح الضوئي بـ CamScanner

Scanned with CamScanner

- **Store Keeper**

Responsible for the Project Manager for:

1. Safe and efficient warehousing of all permanent and consumable items and equipment.
2. Proper documentation and records of all receipt and issue of store items and equipment.
3. Regular replenishing of consumables to desired quality and standards.
4. Ensuring that unserviceable / defective items are isolated from serviceable items and suitably identified to prevent their mixing up with serviceable items.

- **QC Inspector**

Responsible to the QA /QC Engineer for:

1. Ensuring control of documents and data.
2. Monitoring periodic calculation of instruments on site in coordination with concerned Specialist Engineer.
3. Site inspection for the MEP Installation & Material deliveries.
4. Witnessing all necessary testing & commissioning

- **It is the responsibility of all employees to:**

1. Work within the bounds of the Company documented quality program.
2. Bring to the attention of their supervisor or the Quality Engineer any incidence of non compliance with the Egysmart Electromechanical Engineering quality program.
3. Work in a professional and safe manner, reporting any dangerous equipment to the supervisor.

- **Resources**

The management provides adequate facilities and trained personnel for effective functioning of the Quality System.

Trained personnel are assigned for verification activities, whose duties include:

1. To test and monitor incoming inspection, in process and final inspection.
2. To audit the quality system for effectiveness.
3. To verify that only trained and duly authorized personnel are being deployed to carry out the required work.

EGYSMART
FOR MODERN ENGINEERING
ايجي سمارت للهندسة الحديثة

تم المسح الضوئي بـ CamScanner

Scanned with CamScanner

- Management representative

The QA / QC Engineer are the designated Management Representative. He is responsible for ensuring the implementation of the quality program, the identification of quality related problems and the initiation of corrective actions.

The Quality Engineer has the authority and organizational freedom to resolve any and all quality related problems. In the event of an irreconcilable difference of opinion with another manager and / or Department this mater is referred to Managing Director. The Quality Engineer is further responsible for keeping the Managing Director advised of the status and adequacy of the quality program.

3.1.3 Management Review

A comprehensive formal review of the quality system is undertaken by the Project Manager every three months in accordance with the documented procedure.

The review takes form of minutes of meeting and is attended by the personnel specified less than 1 to 5 above.

The meeting reviews data on the performance of the quality management system to ensure its continuing suitability and effectiveness in meeting the Quality requirements.

Responsibility is assigned for corrective action to be undertaken where considered appropriate. Minutes of meeting are circulated to all present ad those with assigned responsibility, master file is retained by The Quality Engineer.

3.2 QUALITY SYSTEM

3.2.1 Quality System Procedures

The Company Quality system is documented in three tiers and considers each of the requirements specified by ISO 9001-1994.
The three tiers are comprised of the following.

- Quality Manual

The Quality Manual describes the policy practiced by Egysmart Electromechanical Engineering to satisfy the requirements of ISO 9001 – 1994 and allocates the responsibilities within the Company. It is supported by Operating Procedures and Work Instruction / Quality plans where applicable.
The functions of Quality Manual are:

EGYSMART
FOR MODERN ENGINEERING
ايجي سمارت للهندسة الحديثة

تم المسح الضوئي بـ CamScanner

Scanned with CamScanner

1. To define Management Policy with respect to Quality Assurance.
2. To ensure uniformity of understanding or performance
3. A training document to ensure continuity of the system when personnel change.
4. To provide a reference base against which the current procedures and practices can be audited and corrective action taken.

Operating Procedures

These describe the procedures which are implemented to fulfill the requirements of the Quality Manual and allocate the responsibilities within the Quality System. The list of Operating Procedures is shown in Annexure I of this manual.

Work Instruction / Quality Plans

Work Instructions are issued where the lack of clear instruction would adversely affect the quality. Work Instructions may include drawings, installation manuals, specifications or any other methods clearly defining the requirements.
Quality plans are prepared when required and provide details of the controls, methods responsibilities and interfaces for specific contracts. All quality plans are authorized by The Quality Engineer.

3.2.2 Quality Planning

The Quality Planning shall define and document how the requirements for quality will be met. This may be achieved by one or more of the following:

1. Preparation of quality plans.
2. Identification and acquisition of skills, equipment or production resources.
3. Ensuring the compatibility of design and engineering details.
4. Identification of new calculation / test equipment requirements.
5. Identification and preparation of quality records.

3.3 CONTRACT REVIEW

Each Contract, subcontract and / or Tender Specifications are reviewed by; Egysmart Electromechanical Engineering to ensure the following:

1. Requirement of the Customer are established, defined and documented.
2. Any discrepancies of the requirement are resolved.
3. Establish that W.A PECKTE; ELECTROMECHANICAL WORKS L.L.C. has the capability to meet the requirements.
4. Records of such contract reviews are made.
5. All amendments made by customers are confirmed in writing and acknowledged in writing by Egysmart Electromechanical Engineering.

EGYSMART
FOR MODERN ENGINEERING
ايجي سمارت للهندسة الحديثة

تم المسح الضوئي بـ CamScanner

Scanned with CamScanner

Quality plans are made to define the points of inspection and allocate own and / or Customer's Resources for the same.

3.4 DESIGN CONTROL

3.4.1 Design and Engineering Input

The requirements for the design and engineering, whether internally generated or customer defined, are reviewed for adequacy. Any problems with these requirements shall be resolved with the originator of the requirements prior to commencement of the design engineering process. All appropriate statutory or regulatory requirements are identified at this stage.

Where the requirement is originated by the customer, the design and Engineering Input review forms an integral part of the Contract Review.

3.4.2 Design and Engineering Output

As the design and engineering progresses the design output is produced. This usually takes form Technical Proposal, consisting of drawings, schedule, equipment catalogues and data sheets, etc. final review and release of Technical Proposal is made by Project Manager.

3.4.3 Design and Engineering Review

At appropriate stages of the design and engineering process the design reviews are held between
The engineers responsible for different parts of the project. They critically appraise progress and re-evaluate the design plan.

The design review meeting is minute, the minutes are signed by Project Manager and distributed to all present at the meetings.

3.4.4 Design and Engineering Changes

If following the comments received from the customer, it becomes necessary to modify to amend the documentation: this is generates, controlled and released in the same manner as for the original design output documentation.

3.5 DOCUMENT AND DATA CONTROL

3.5.1 Document and Data Approval & Issue

EGYSMART
FOR MODERN ENGINEERING
ايجي سمارت للهندسة الحديثة

تم المسح الضوئي بـ CamScanner

Scanned with CamScanner

Documents and data specified under 3.2.1 of this manual are made available to the concerned functions of the Company by controlled methods. These documents and data are reviewed and approved for adequacy by The Quality Engineer prior to issue.
Pertinent issues of appropriate documents are available at all locations where operations essential to effective functioning of Quality System is performed.

3.5.2 Document changes

Changes to documents specified under 3.5.1 above are reviewed and approved by the Quality Engineer as it for their original issue.

Master set of these documents is maintained by The Quality Engineer.

3.6 PURCHASING

3.6.1 Evaluation of Subcontractors

An Approved Subcontractors List and Approved Vendors List are maintained by The Quality Engineer. To obtain "Approved" status the subcontractor or Vendor must:

1. Be approved by recognized body to an appropriate standard.
2. Be appraised by W.A PECKTE; ELECTROMECHANICAL WORKS L.L.C.
3. Have satisfactory history of previous supplies to; Egysmart Electromechanical Engineering

3.6.2 Purchasing Data

Purchase Orders contain clarified, unambiguous information and are accompanied by drawings, specification, etc. as required. Purchase Orders are prepared by Specialist Engineers and reviewed and authorized by the Project Manager.

Amendments to Purchase Orders are prepared and authorized in the same way.

3.6.3 Verification of Purchased Product

When specified by Customer Requirements or by; Egysmart Electromechanical Engineering requirements, the inspections at Vendor's premises are specified in the Purchase Order. Egysmart Electromechanical Engineering makes the necessary arrangements and liaison between the Customer and Vendor to permit the Customer Representative to verify that the purchased product conform the specified requirements.

Egysmart from applying normal Quality System controls.
An order placed with the subcontractor may not be further subcontracted in full or in part without the written permission of Egysmart

EGYSMART
FOR MODERN ENGINEERING
ايجي سمارت للهندسة الحديثة

تم المسح الضوئي بـ CamScanner

Scanned with CamScanner

3.7 CONTROL OF CUSTOMER SUPPLIED PRODUCT

In case the Egysmart is using Customer Supplied Product, these are checked for compliance with the requirements and its condition as soon as practicable. Comprehensive verification report is submitted to the Customer immediately after any non
Compliance is found. Report is reviewed and authorized by the Project Manager.

3.8 PRODUCT IDENTIFICATION AND TRACEABILITY

All products received by Egysmart are identified, in case original identification is sufficient no further marking etc. is mace. If the supplied product has no identification, the same is provided by marking, label, stickers as appropriate and maintained over production stages.

Products of particular importance, or when required by specific Contract, or by specific Code or Regulation, are provided with traceability marking codes (stamping, labels, etc.) which permit all the documents relevant to receipt, construction, shipping and installation to be traced.

3.9 PROCESS CONTROL

Work Instructions, usually in the form of drawings, are issued to those areas which affect the quality of the manufactured product. Criteria for workmanship are stipulated I written form or by Representative samples. Manufacturing process which is important form the point of view of the
Quality are qualified and controlled throughout their execution.

Work Instructions for installation are issued in the form of drawings. Work completed is subject to installation check and suitable report is maintained for project records and / or submission to the Customer for his verification and approval.
Work Instructions and / or criteria for testing and commissioning are based on applicable regulatory requirements or on testing procedures, which are prepared and approved by the Customer for particular equipment in accordance with Customer requirements. In all cases the reports are made and maintained for project records and / or submission to the Customer for his verification and approval.

Equipment Instruction Manuals serve as Work Instructions for Maintenance and servicing works wherever applicable. The equipment which was maintained or serviced is suitably marked by placing tag / label indicating date and person who performed the work.

In all cases reports are made and maintained for project records and / or submission to the Customer for his verification and / or approval.

3.10 SPECTION AND TESTING

EGYSMART
FOR MODERN ENGINEERING
ايجي سمارت للهندسة الحديثة

Scanned with CamScanner
تم المسح الضوئي بـ CamScanner

Product is subject to inspection and test at various stages. The frequency and performance of inspections and tests is in accordance with the quality plans. Non conformance if any, are handled in accordance with the procedure for control of non conforming product.

3.10.1 Receiving Inspection & Testing

All materials / items are inspected and checked on receipt for conformance with the requirements and condition / transportation damages.

3.10.2 In Process Inspection & Testing

Final inspection and testing is carried out in accordance with customer requirements, Quality Plan or regulatory requirements to complete the evidence of conformance of the finished product / service to the specified requirement.
No product / service shall be declares as completed until all the specified activities are satisfactorily completed and the associated data and documentation is available and authorized by Project Manager.

3.10.3 Inspection and Test Records

Records are maintained for all inspections and test. These records identify the inspection authority responsible for the release of the related product / service as conforming product.

3.11 CONTROL OF INSPECTION MEASURING & TEST EQUIPMENT

Measuring and test equipment by Meta WAP Elect mechanical engineering LLC. used for tests, Inspection and quality control activities is registered, identified by means of suitable stickers, etc, and controlled. The equipment is calibrated and checked at specified intervals in accordance with Regulatory requirements and / or equipment manuals to ensure that measurements uncertainty is known and is consistent with the required measurement capability.

When test equipment is used on loan basis or provided by the customer its calibration records / certificates are reviewed for suitability prior to use.

Each item of measuring and test equipment is permanently marked with an individual serial number and, where practicable, labeled to indicate calibration status and date. Corresponding records are kept for each item of measuring and test equipment which stipulate the calibration frequencies and tolerances and record the checking and calibration results.
Calibration equipment identification numbers, etc. must be shown on the test certificates / Inspection reports made with the use of this equipment.
In- house calibration is carried out in accordance with written instructions by trained personnel Using reference standards in a known state of calibration and traceable to national / international standards. Calibrations are carried out in suitable environmental conditions.
When items of measuring and test equipment are calibrated by an external source, dated Certificates are supplied containing details of any rectification carried out and the identification of reference standard used.

EGYSMART
FOR MODERN ENGINEERING
ايجي سمارت للهندسة الحديثة

Scanned with CamScanner
تم المسح الضوئي بـ CamScanner

Any equipment found to be defective or overdue for calibration is withdrawn from use. The critically of the previous measurements made with this equipment since its last calibration are assessed by Specialist Engineers and corrective action is identified when considered necessary. Measuring and test equipment is handled and stored in a manner suitable to preserve its Accuracy and fitness use.

3.12 INSPECTION AND TEST STATUS

3.12.1 Inspection / test status identification

The inspection and test status can be readily ascertained at all stages of manufacture /installation/ testing by at lest one of the following means:

1. labeling
2. marking / stamping
3. records

The inspection identification shall identify the person for release of the product.

3.12.2 Inspection status maintenance

The inspection and / or Status identification is maintained over the receipt, storage manufacture and installation to ensue that only those products that have passes the required inspection and testing are forwarded, used or installed.

3.13 CONTROL OF NON CONFORMING PRODUCT

3.13.1 Non conformance

Non-conforming products are controlled to prevent inadvertent use or further processing. The controls make provisions for:

1. identification
2. documentation
3. evaluation
4. disposition and notification

EGYSMART
FOR MODERN ENGINEERING
ايجي سمارت للهندسة الحديثة

3.13.2 Customer Complaint

Non-conformance identified by the customer is reviewed and dispositions are made by The Quality Engineer after consultation with Specialist Engineer to rectify the present non conformance and to prevent the recurrence of the same.

Scanned with CamScanner
تم المسح الضوئي بـ CamScanner

3.13.3 Action and Disposition

The Project Manager reviews instances of non conformance and decides on the action to be taken:

1. re-grade for alternative applications
2. rectify the non conformance by re-working
3. scrap or reject the concerned product
4. request a concession of the Customer to use as is

When concession is reported to the customer the description of non conformance or repair completed is recorded t denote actual condition of the product.

3.13.4 Re- worked items

All re-worked items are re-inspected and tested in accordance with the specified requirements.

3.14 CORRECTIVE AND PREVENTIVE ACTION

3.14.1 Investigations of Non-conformance

Each and every case of non conformance is investigated for the cause of non-conformance and corrective or preventive action to prevent recurrence. Results are reviewed and documentation is maintained by The Quality Engineer.

3.14.2 Analysis of Non Conformance

Instances of non conformance, customer complaints, warranty claims, reported service problems and selected records are analyzed to eliminate potential causes of non conforming products or services. Results are reviews and documentation maintained by The Quality Engineer.

3.14.3 Implementation of corrective and preventive actions

The Quality Engineer is responsible for initiation the corrective and preventive action is respect of:

1. Non compliance's arising from internal audits and 3rd party visits.
2. Identified by customers.

EGYSMART
FOR MODERN ENGINEERING
ايجي سمارت للهندسة الحديثة

3.14.4 Follow-up Evaluation

Corrective and preventive actions defined are followed up by the Quality Engineer so that their effectiveness can be assessed and controlled. Where required further actions are defined. The effectiveness of actions is analyzes by the Quality Engineer and reported on the Quality System review meetings.

Scanned with CamScanner
تم المسح الضوئي بـ CamScanner

Changes in procedures, documentation, etc. resulting from corrective and preventive action are implemented and recorded.

3.15 HANDLING, STORAGE, PACKING AND DELIVERY

3.15.1 Material storage issue and handling

All materials and equipment are held in designed storage facilities. Individually ordered items are delivered directly to destination site, while bulk ordered materials are stored in permanent GEECO facilities.

Storage conditions are assessed for conformance with product specification to ensure that items do not suffer damage or deterioration that will adversely affect their quality.

3.15.2 Preservation and Delivery

All materials for delivery to the customer are preserved and identified so as to ensure full traceability with relevant documentation.

The packing is made strictly as per customer requirements. When customer does not specify packing and dispatch requirements the product is protected and dispatched to suit conditions of transportation and final destination point.

3.16 CONTROL OF QUALITY RECORDS

3.16.1 Subject of the records

The documentation defining the quality requirements of the products (drawings, instruction, procedures, specifications) as well as the documents which record and certify the quality obtained inspection / test reports, non conformance reports, qualifications certificates, audit reports) are filed to retain evidence of the Quality System achievement. The same applies to the equivalent documents of the suppliers.

EGYSMART
FOR MODERN ENGINEERING
ايجي سمارت

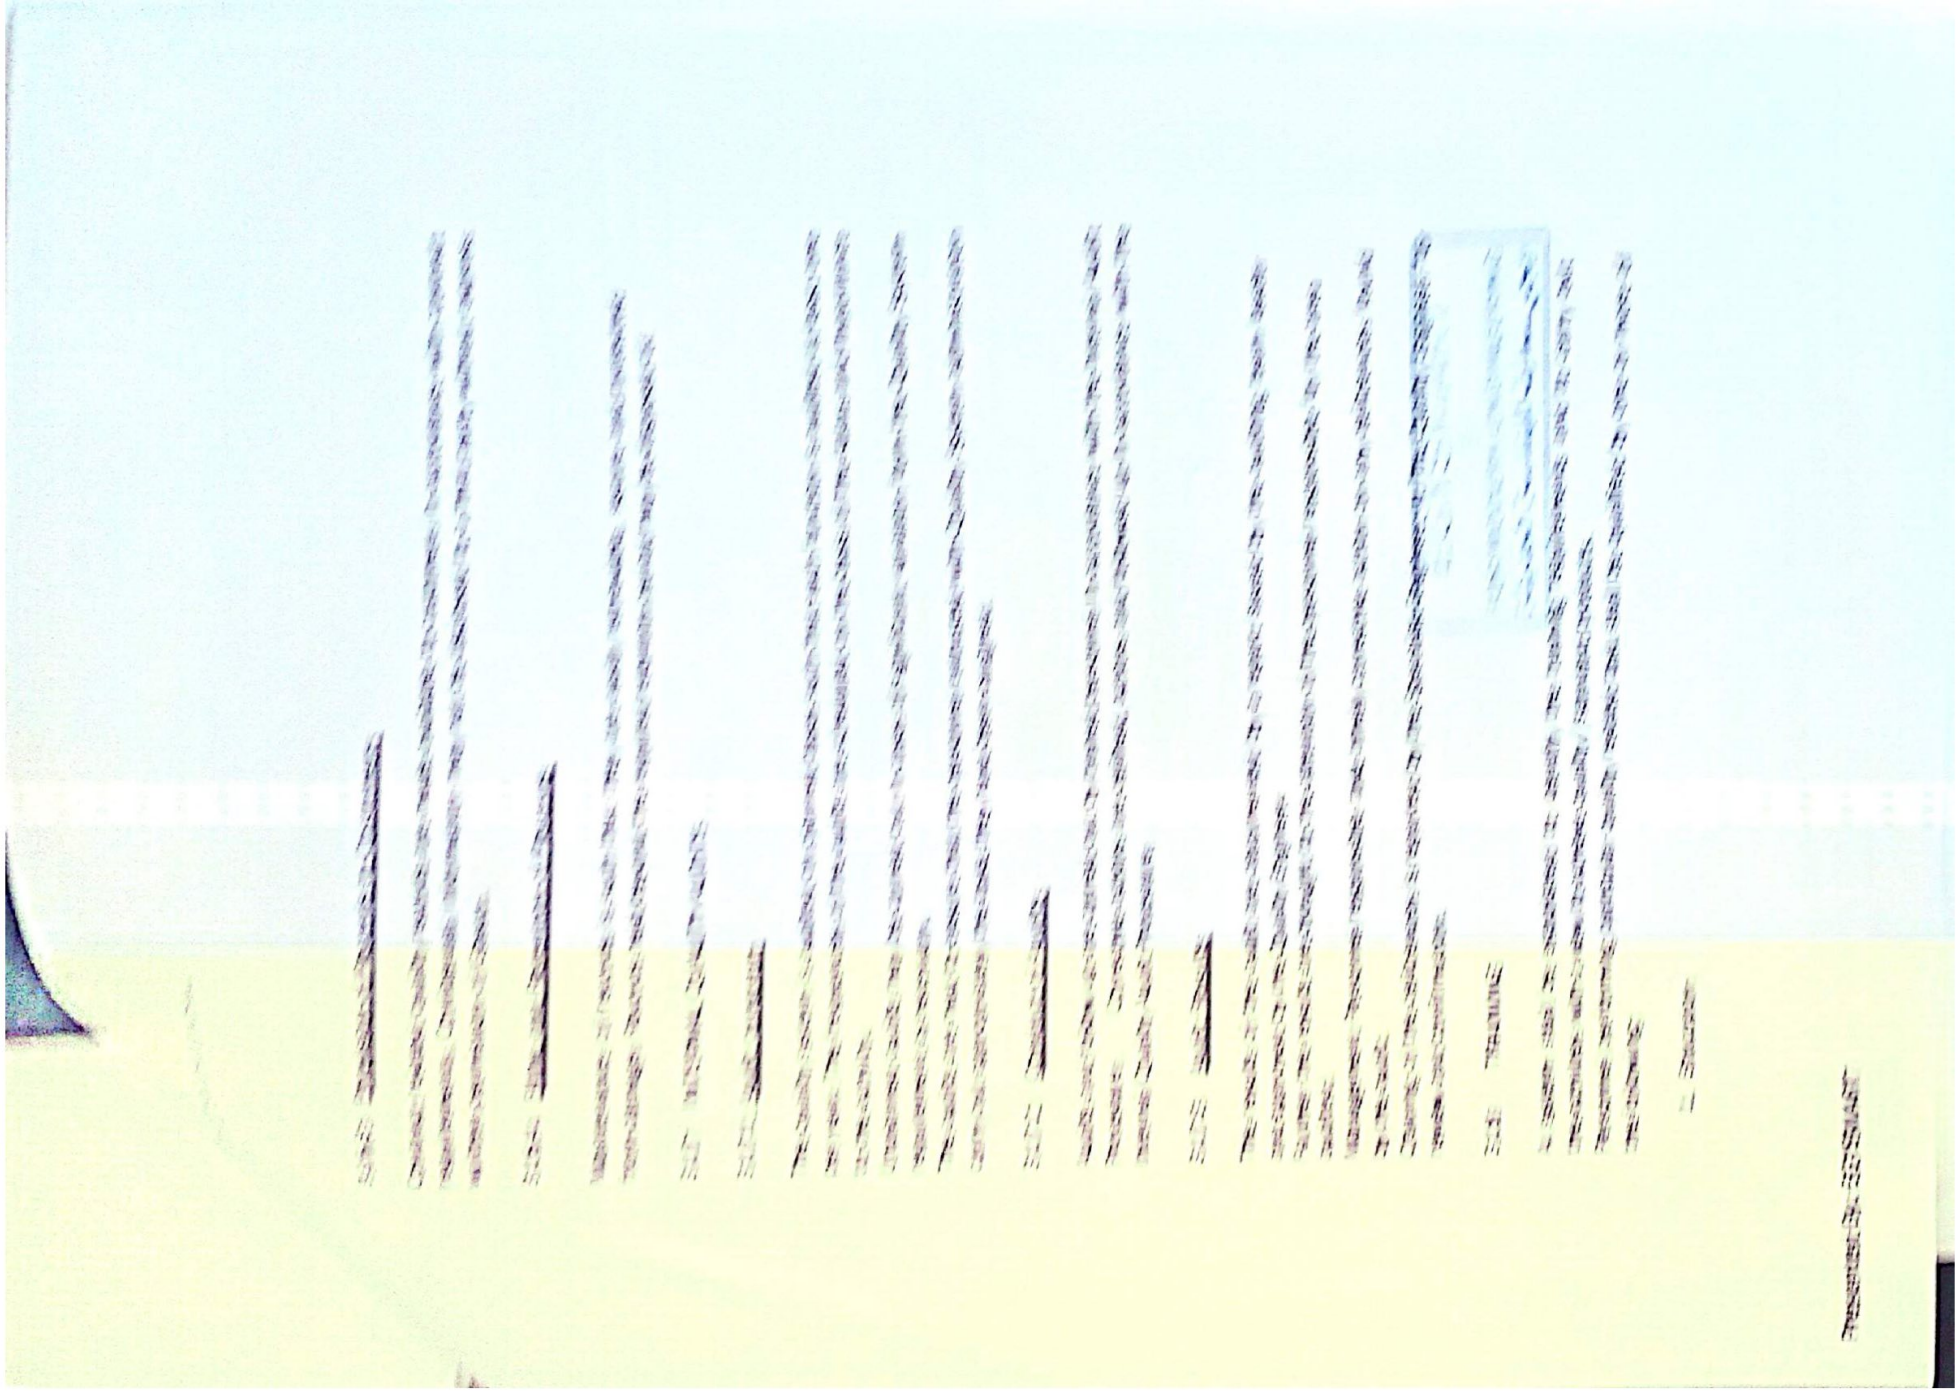

3.16.2 Records Control

Records to provide documentary evidence of the effective operation of the quality management system are stored and maintained under control of The Quality Engineer and stored for a

Minimum of 3 years unless longer retention time is specified in a particular contract.

Pertinent Subcontractor or Vendor quality records shall be part of the W.A PECKTE; ELECTROMECHANICAL WORKS L.L.C. records. The records generated by the system are references in the relate procedure and detailed in quality Records Procedure.
